Engineering Hiring Team
Target Engineering Team

November 1, 2026

Dear Hiring Team,

I am writing to express my strong enthusiasm for the **Software Engineering / AI Systems Engineer** role at your company. As a final-year B.Tech student in Computer Science & Engineering (IoT) graduating in 2027 and winner of the Smart India Hackathon (SIH) 2025, I bring hands-on experience designing production-grade backend systems, automated ingestion pipelines, and rigorous test automation suites.

Throughout my engineering work, I have focused on building measurable, high-availability software architectures:

- **AI Backend & Async Pipelines:** Engineered an end-to-end product ingestion pipeline using FastAPI, Celery, Redis, and MongoDB with structured Gemini outputs, automated deduplication, and rate-limit resilience.
- **Computer Vision & Embedded Robotics:** Designed an autonomous 6-DOF pick-and-place robotic arm system with OpenCV color segmentation and visual servoing, slashing memory footprint by 75% on Raspberry Pi 4B.
- **Testing & CI/CD Systems:** Architected AmitAstro with 170+ automated tests across Vitest, Supertest, and Playwright, validating cross-database behavior (SQLite & PostgreSQL) via GitHub Actions CI service containers.

My core competencies in Python, FastAPI, TypeScript, PostgreSQL, and Distributed Systems directly align with your engineering objectives. I thrive in high-ownership engineering environments and look forward to contributing immediately to your team.

Thank you for your time and consideration. I welcome the opportunity to discuss my qualifications in an interview.

Sincerely,

Mahansh Gaur
